

Chicken Production in the U.S. is More Sustainable Than Ever Before

It takes **75%** fewer resources to produce the same amount of chicken than it did in 1965!

72% less farm land

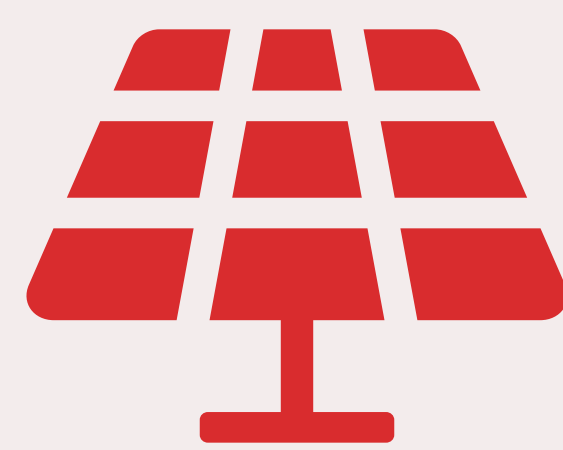

58% less water

39% less fossil fuels

Over **95%** of poultry litter is recycled and reused to fertilize crops.

Chicken farmers are continuously adopting **new technology** to reduce energy use.

36% reduction in greenhouse gas emissions
